WORK EXPERIENCE

Pastoriza Auto Repair - Software Engineer

November 2025 - January 2026

Miami, FL

- **Collaborated with the business owner** to develop a web application that will engage customers to **increase business by 10%** and maximize customer satisfaction and business exposure.
- **Integrated an ecommerce store** to solve the problem of backstock to minimize physical storage needs for parts by selling excess parts in an automated fashion and **increase business profits by 5%**.
- **Implemented an appointments feature** for customers to increase retention and address their concerns.

PERSONAL PROJECTS

Chalupa Speak Voice and Video Chat - C++, Asio, Opus, GoogleTest, CMake

- **Engineered a low-latency communication system** using **C++** and **Asio**, utilizing an asynchronous event-driven architecture to handle concurrent user connections efficiently for messaging and audio.
- **Implemented a hybrid networking stack**, employing **TCP** for reliable text transmission and **UDP** for high-performance voice streaming to minimize jitter and lag for reliable audio processing.
- **Integrated the Opus audio codec** to provide high-fidelity voice data with dynamic bit-rate adjustment, ensuring clear communication between users even under varying network conditions.
- **Ensured system reliability and performance** through rigorous unit testing with **GoogleTest** and a modular build system managed by **CMake** for cross-platform compatibility with Windows, Linux, and MacOS.

World of Warcraft Shot Caller Engine - C++, GoogleTest, CMake, Python

- **Designed a parser** to process the World of Warcraft advanced combat log, transforming raw text into structured data for analysis for accurate real-time shot calling in Discord for the whole team.
- **Engineered a real-time state machine** to monitor in-game events and generate optimal, low-latency callouts, reducing player error and improving team performance in challenging mythic plus dungeons.
- **Tested and optimized** the application to only process combat events that provide useful information, discarding other events to ensure **minimal runtime overhead** during gameplay to maximize gaming experience.
- **Leveraged GoogleTest** to develop **unit tests** for my application to ensure a robust application.

Trolling Time Game Notifications- Go, AWS, Docker, Lambda, DynamoDB, SES

- **Leveraged Amazon Web Services** to create an application to notify users when their friends are in a game of League of Legends so they can keep up with their friends in today's busy world.
- **Developed a RESTful API** with Golang to handle user data and manage user events and information.
- **Integrated Amazon Simple Email Service** to send automated email reminders for upcoming plans, improving user experience so they can know when their friends are online by checking their email.
- **Engineered a DynamoDB data model** to store player information along with historical match data for trend analysis and maintain a comprehensive log of successful and failed notifications for testing and auditing.

EDUCATION

Miami Dade College - A.A., Biology

2017-2020 Miami, FL

- Florida Bright Futures Scholarship Recipient

University of Miami - Fullstack Software Engineering

2024 Miami, FL

Florida International University - B.S., Computer Science

2025-2027 Miami, FL

- Society of Hispanic Professional Engineers
